

Morpho's software "Morpho Hyperlapse" and "PhotoSolid" featured in Samsung Galaxy Note5 & S6 edge+

Tokyo, Japan – October 8, 2015 – Morpho, Inc. (Hereinafter, "Morpho"), a global leader in image processing solutions, announced today that "Morpho Hyperlapse" and "PhotoSolid" are featured in Samsung Galaxy Note5 & S6 edge+.

About the Products

Morpho Hyperlapse™

"Morpho Hyperlapse" is a software product which enables users to play at high speed, a long sequence of a video recorded while walking, driving, etc. When a video is recorded in motion, professional camera equipments are often required to stabilize a video. Without any equipment, it is quite difficult to stabilize a video and it often ends up creating a video with annoying hand jitters, motion fluctuations, etc. To surmount such difficulties, "Morpho Hyperlapse" utilizes our core imaging technology, "SOFTGYRO®", for detecting dominant motions in a video to be removed. With "SOFTGYRO", users can record a long video sequence to be stabilized enough to comfortably watch without any other special gear such as a tripod, even if it is recorded in motion or when played at high speed.

PhotoSolid®

"PhotoSolid" is an embedded software program for stabilizing a static image. It minimizes the amount of camera shakes and synthesizes a high-quality image with a high signal-to-noise ratio by combining multiple images that are taken by a fast shutter with a low exposure. It uses "SOFTGYRO" for compensating camera shakes accurately among multiple images and achieves an industry's top-class image stabilization. "PhotoSolid" is especially useful for night portrait, telephotography, and any situations with hand jitters and likely camera shakes. The major manufacturers of smartphones and digital cameras have chosen "PhotoSolid" for their products in the global market.

*Inventions related to "SOFTGYRO" are patented in Japan, the USA, Europe and Korea.

*Inventions related to "PhotoSolid" are patented in Japan, the USA and Europe.
